Contra Corona Soap Collection

How soap works*: The **CORONAVIRUS** has a membrane of oily lipid molecules, which is studded with proteins that help the virus infect cells. **SOAP MOLECULES** have a hybrid structure, with a head that bonds to water and a tail that avoids it. **SOAP** destroys the virus when the water-shunning tails of the soap molecules wedge themselves into the lipid membrane and pry it apart. **SOAP** traps dirt and fragments of the destroyed virus in tiny bubbles called micelles, which wash away in water.
